In a BLDC motor, feedback is achieved by using multiple feedback sensors. The most commonly used sensors are Hall sensors and optical encoders. Within a 3-phase BLDC the number of teeth (poles) is a multiple of 3 and the number of magnets is a multiple of 2.

3-Phase Brushless DC Motor Control with Hall Sensors ...

3-phase BLDC Motor Control with Hall Sensor: The DC electric motor has appeared for a long time. The electric coil rotates due to the magnetic field generated by the permanent magnet or excitation coil within the electric motor. To electric motors with only one pair of magnetic poles, the space between the electrodes is 180°.

Despite different structures, all 3-phase permanent magnet motors (BLDC, PMSM or PMAC) are driven by a PWM-modulated 3-phase bridge (three half bridges) so as to supply the motor with variable frequency and amplitude 3-phase voltages and currents.

Permanent Magnet Synchronous Motors (PMSM) & BLDc motor ...

Keeping that in mind, a BLDC Motor is a type of synchronous motor in the sense that the magnetic field generated by the stator and the rotor revolve at the same frequency. Brushless Motors are available in three configurations: single phase, two phase and three phase. Out of these, the three phase BLDC is the most common one.
