If you've been looking for a great place to find free audio books, Librivox is a good place to start.

Animal Plant And Microbial Toxins

During the past two decades, research on animal, plant, and microbial toxins has expanded rapidly, and new and exciting information has appeared to clarify both the clinical and therapeutic aspects of intoxication and, even more important, to help us understand more exactly the structure and the mode of action of toxins on a molecular basis.

For compounds isolated from natural sources (plant, microbial, and animal peptides; see below), both positive and negative modulating effects on ASICs have been described. Thus, some ligands show the ability to reduce or, conversely, increase the amplitude of the acid-induced current of one or several ASIC isoforms (Figures 1C, D orange and ...

Many plant pathogens secrete toxins that enhance microbial virulence by killing host cells. Usually, these toxins are produced by particular microbial taxa, such as bacteria or fungi. In contrast, many bacterial, fungal and oomycete species produce necrosis and ethylene-inducing peptide 1 (Nep1)-like proteins (NLPs) that trigger leaf necrosis and immunity-associated responses in various plants.

Many animals, plants, and microbes produce toxins that exert their toxic and sometimes lethal effects toward other living organisms. Toxins are believed to contribute to the survival and proliferation of a particular organism. Often, the same organism can produce more than one toxin and a number of these toxins are thermally resistant.
