Where To Download

Controlled release formulations of pesticides are retarding repositories, which release their biologically active constituents into their environment over a defined period of time. In these formulations, the substances are chemically bound or physically incorporated in a polymer matrix by means of different techniques.

Alachlor was released from a controlled-release formulation (CRF) when applied to a sandy loam soil under conditions of constant temperature and moisture and achieved concentrations of 0.1–0.2 mg/kg after 1 week. Soil concentrations of 0.2–0.8 mg/kg were maintained for at least an additional 8 weeks.

The foliar pesticide retention of the AVM/CO-PU nanoemulsions is improved, and the photolysis rate of AVM in the AVM/CO-PU nanoparticles is significantly slower than that of the free AVM. A release mechanism of the AVM/CO-PU nanoemulsions is proposed, which is controlled by both
