FE Past Examination Questions and Answers | ITPEC.org

Kinematic equations relate the variables of motion to one another. Each equation contains four variables. The variables include acceleration (a), time (t), displacement (d), final velocity (vf), and initial velocity (vi). If values of three variables are known, then the others can be calculated using the equations. This page demonstrates the process with 20 sample problems and accompanying ...

Kinematic Equations: Sample Problems and Solutions

In the fourth problem (First downloaded file - Moment and Spring Constant), the spring constant was supposed to be 240 N/mm as shown in the video rather than 24 N/mm. I fixed the solution and it should now reflect on the website. For sixth problem, (First downloaded file- Distance travelled as a graph), I couldn't find a correction.
